

**You got a new employee –
the intelligent BERINGER compactor with ReCos system**

Quick Guide ReCos System

Our ReCos System offers online-based remote indication and tracking services for your mobile BERINGER reducer.

Your benefits:

- ✓ Permanent localization of the compactor with GPS possible
- ✓ Set compactor off service from your computer
- ✓ Check compactor's fill level from your office
- ✓ Check disturbances of your compactor from your computer
- ✓ No special software or IT equipment necessary
- ✓ Status E-Mail service

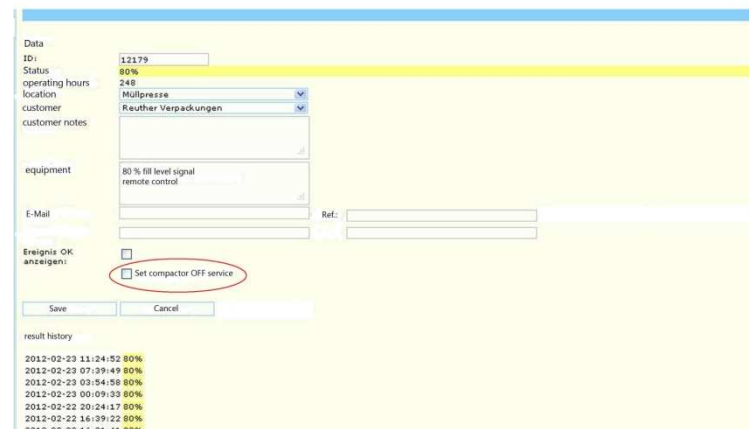

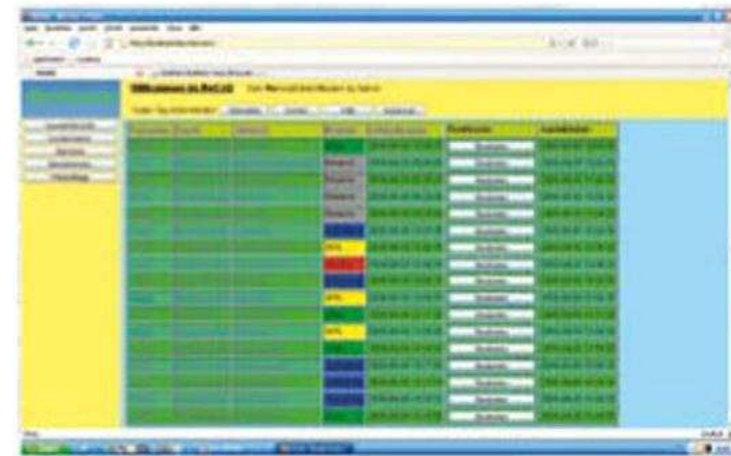

...a cooperation of BERINGER GmbH and Setron GmbH Germany

Functions

Status	yellow	container fill level is 80 %
Status	orange	container fill level is 100%
Status	red	disturbance
Status	green	normal
Status	grey	reducer is buffer
Status	blue	reducer is on the road

Set reducer off service:

ReCos offers you the possibility to set the compactor off service while it is located anywhere! Just tick "set compactor OFF service" on your computer and the control panel is locked. It is impossible for your customer to set the compactor back in service without contacting you. To operate the reducer again, undo the tick at "set compactor OFF service" on your computer.

Localization

- the compactor can be tracked with GPS and compactor's current location is displayed in the system
- with this system you always know your compactor's location

...a cooperation of BERINGER GmbH and Setron GmbH Germany

Software / terms of use

The ReCos System is functioning with an online database. That means you register online at our server and you can see all your compactors and their status / location at first glance.

You just need an internet connection and an updated browser (e. g. Internet Explorer or FireFox, etc.). The compactor itself is equipped with a SIM card and is sending its status via the mobile communication network.
